

Thermage CPT™ System

Corymbia House is proud to introduce **Thermage CPT™**. This new model is the gold standard in non-invasive skin tightening and body contouring. The new system combines the *Comfort Pulse Technology™* with a new vibrating handpiece to enhance efficacy and greatly improve patient comfort. In addition, the scientifically advanced treatment tips provide faster, more comfortable face and body treatments.

Thermage is a monopolar device that delivers radiofrequency (RF) energy. It has been reported to be an effective and safe noninvasive technique to tighten the skin on face, neck and body. Thermage CPT is the ultimate non-invasive procedure to help smooth, tighten and contour the skin for a naturally younger looking appearance with no surgery, no injections and little to no downtime.

How it works

Unlike lasers (eg Fraxel), which convert light to heat and target a specific chromophore through the selective photothermolysis, Thermage transfers higher-energy fluences to the skin through a coupling method. The electrical energy transmitted is converted to heat upon reacting with the skin's resistance.

Thermage utilizes the best radiofrequency technology and now, with the introduction of the vibratory mode, delivers more therapeutic heat across the treatment area, allowing for more effective skin tightening results at greater comfort. Thermage® heats the deepest layers of your skin to help tighten existing collagen and stimulate your body's natural renewal of collagen. This creates subtle, natural looking results of smoother skin, softened wrinkles and lines and an overall younger looking appearance.

Benefits of the New Thermage® Technology

- **Enhanced results** – more therapeutic heat delivered across the treatment area
- **Superior comfort** – made possible through Comfort Pulse Technology and a new vibrating handpiece
- **High patient satisfaction** – you will be happier with the results and treatment experience

Thermage Body Treatment

GET BACK THE BODY YOU USED TO KNOW

You exercise, eat right and take good care of yourself. So why does it seem harder than ever to keep some parts of your body tight, smooth and shapely?

Truth is, as your skin ages, your collagen breaks down faster than your body can rebuild it – which often results in unwanted sags, bulges and wrinkles. Thermage can help renew your

body's collagen to tighten, lift and contour your skin – with no surgery, no injections, and little to no downtime.

In other words, with Thermage, you can celebrate the return to your younger looking shape. Thermage can help you get back to your pre-pregnancy jeans, get a handle on the love handles, address that thin layer of skin you just can't seem to shake, and tighten and lift all over.

What Thermage treats

- Wrinkled, crepey or sagging skin on the tummy, knees, arms, legs, hands or buttocks
- Sagging and wrinkled skin after pregnancy or weight loss
- Thin, loose, crepey skin on hands
- Appearance of cellulite

Natural looking results:

- Flatter, smoother skin on the tummy, knees, legs, arms, hands or buttocks
- Tightening, firming and lifting of love handles and unwanted bulges
- Softened wrinkles above the knees and elsewhere
- Reduction of crepey skin on the arms and other areas
- Thicker, smoother skin on the hands
- Smoothed dimples for temporary improvement in the appearance of cellulite

The Thermage body procedure takes anywhere from 45 to 90 minutes, and you can return to routine activities right after treatment. For best results, depending on severity of changes, you may need more than one treatment.

Frequently Asked Questions

What is the Thermage CPT™ System?

The new Thermage CPT System represents a significant leap forward in skin tightening and body contouring technology utilizing *Comfort Pulse Technology* to get skin back to its healthy, youthful appearance. This treatment is the premier non-invasive procedure to help smooth, tighten and contour the skin in a single treatment with no surgery, no injections and little to no downtime.

How does the Thermage CPT procedure work?

The procedure works by using best-in-class radiofrequency technology to heat collagen fibers deep in the skin and underlying tissue. The new Thermage CPT system has an improved, more uniform heating action that causes the structures in the skin and underlying tissue to immediately tighten while stimulating collagen growth. Over time, new and remodeled collagen is produced to further tighten and contour the skin.

What makes the new procedure more comfortable?

The Thermage CPT system incorporates proprietary Comfort Pulse Technology™ in every aspect of the system including a new vibrating handpiece and scientifically advanced treatment tips. The Comfort Pulse Technology delivers energy more efficiently through the new system to the area being treated while the redesigned face and body tips distribute heat more efficiently. The new vibrating handpiece also provides a more comfortable experience.

When will I see results?

Visible results are often immediate and improve over time. Measurable tightening and contouring improvements appear gradually over a two to six month time period following a single treatment session.

How many treatments will I need?

Unlike many procedures requiring four or more sessions, most Thermage® patients benefit from a single treatment. The treating doctor will determine the course of treatment that is right for each patient, based on the patient's needs and goals.

Where on the body is the Thermage CPT procedure performed?

The Thermage CPT procedure is designed especially for the face and the body. It can help tighten skin safely on most body parts, including the face, eyes, tummy, arms, hands, thighs and buttocks.

How long does the Thermage CPT procedure take?

The Thermage CPT procedure is a completely non-invasive, safe treatment that is performed only in a doctor's office. Depending on the size and location of the area to be treated, the procedure may take as little as 20 minutes or up to one hour.

Is there any special preparation or follow-up regime?

No. Unlike surgery, there is no pre-procedure preparation, such as blood work or fasting required. With little to no downtime, most patients can return to their regular activities immediately following treatment. There is no special care after treatment. Some patients exhibit a temporary redness or minor swelling after treatment, this usually resolves within 24 hours. Good skin care and sunscreens are recommended as part of your regular skin care regimen. The only signs of treatment are naturally smoother, younger and healthier skin.

How long will the effects of the Thermage CPT procedure last?

The Thermage CPT procedure helps tighten existing collagen and stimulate new natural collagen production for up to six months following the treatment. Results may last for years depending on the patient's skin condition and natural aging process.

Is Thermage the only radiofrequency technology on the market today?

While there are other skin care treatments that use radiofrequency energy, only Thermage utilizes proprietary monopolar radiofrequency technology to deliver uniform volumetric heating into the dermal and subcutaneous layers of the skin to help naturally tighten and contour underlying tissue. Also, Thermage generally achieves results in a single treatment compared to other technologies requiring multiple treatment sessions.

How much does the Thermage CPT procedure cost?

The cost for the Thermage CPT procedure depends on the areas being treated. In the U.S., the price of a face procedure may range from \$1,000 to \$5,000. Other body procedures vary based on area being treated. The physician will discuss his or her fees with the patient at the time of the consultation. The costs of Thermage can be significantly less than plastic surgery and the results are more natural looking than surgery.
